

VOLT

Lightning-Quick Detection and Response.

Hilltop Technologies' Volt delivers continuous, 24/7 protection through advanced Endpoint Detection and Response (EDR) software. Leveraging unparalleled expertise from industry leaders at the CIA, FBI, Tesla, Morgan Stanley, Microsoft, and Chainalysis, we offer comprehensive services that include detailed forensic analysis, swift remediation, active threat hunting, and continuous monitoring.

With a demonstrated track record of successfully remediating ransomware attacks, addressing denial of service incidents, and recovering funds, we resolve complex security challenges with proven performance. Discover how our unparalleled expertise and comprehensive services can enhance your organization's security and resilience.

Continuous Monitoring

Uninterrupted Protection

Active Threat Hunting

“*In today's ever-evolving digital landscape, having access to expert cybersecurity guidance is critical, especially for smaller institutions. Our partnership with Hilltop Technologies ensures that our college can focus on its mission of offering a high-quality academic experience and continue thriving in a digital world while safeguarding the data and privacy of our students, faculty, and staff.*”

Heath Hase
Chief Information Officer, William Jewell College

We track the storm, so you can sleep soundly.

Enterprise-Level Defense

Volt seamlessly aggregates data from endpoints, cloud environments, and firewalls to provide comprehensive protection against vulnerabilities. By consolidating these diverse data sources, Volt ensures that no potential threat goes unnoticed, offering robust security coverage across your entire IT infrastructure.

Real Time Threat Feed

Volt integrates real-time threat feeds from our intelligence partners, delivering fast and instant insights on emerging threats. This ensures your defenses are continuously updated with the latest threat intelligence to keep your systems protected.

Adaptive Technology

Our machine learning-powered EDR provides real-time threat detection and rapid response, adapting to new threats as they emerge. It continuously evolves to keep your systems secure and one step ahead of attackers.

Proactive Attack Surface Management

Our SOC analysts work 24/7 to proactively hunt for new and emerging threats, ensuring your environment remains secure. They respond to alerts and threats in real-time, providing continuous vigilance to keep potential vulnerabilities in check and strengthen your overall cybersecurity posture.

Dark Web Surveillance

Volt's dark web monitoring services actively scan hidden forums and marketplaces for compromised credentials and sensitive information. By identifying leaks and breaches before they are weaponized, we help protect your organization from potential exploitation.
